1. Executive Summary

The Symbiotic project started on June 1 2015, with a scheduled duration of 36 months. One of its first tasks was the creation of the project web site, which is to serve two main purposes: to serve as the central online dissemination point of the Symbiotic initiative, and to house a private area for the consortium to exchange files and communicate with each other.

The project website was created in month 2 of the project (July 2015), and will be updated regularly through the project life. It is located at the address www.symbiotic-project.eu.

The website was developed using open source and free components, and does not contain proprietary technologies. It is built on WordPress, version 4.2.3, using its Content Management System (CMS), a technology based on the PHP programming language.

The final website includes several features such as project description, news, consortium partner information, etc. The present document aims to detail the structure of the developed website as it exists on that date. The structure of the document mirrors this organisation, describing in each chapter a different page of the website.

2. Page Structure

All pages in the website follow a similar structure, being divided into three areas:

- **Top bar:** houses the links to the main areas of the website (Home, Project, Consortium, Publications, and Contact);
- **Middle (work area):** where the information specific to each page is placed (e.g. a description of the project in the Project page);
- **Bottom bar:** miscellaneous information and links (including a link to the private area that will serve for the consortium to exchange files and communicate with each other).

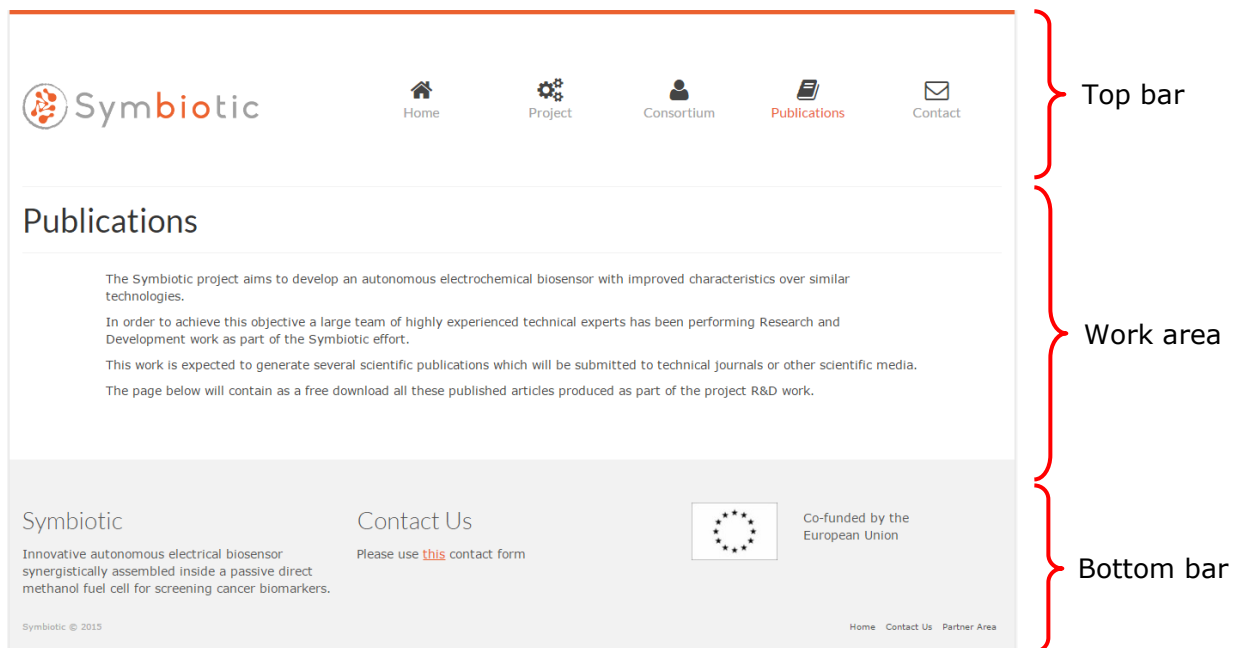

Figure 1 – Page structure

3. Main Page

The main page of the project website houses a summary of what the project is about, and offers links to various dedicated pages, as well as the latest news about the project work. Being the entry point to the other more specific pages, it is designed as a generic page that includes all the primary information and links a visitor needs.

In particular the main page offers news about the project and relevant events (e.g. conferences on the same area as the project) updated continuously. This is the same type of news reports that already exists in many websites, and includes title, date and description;

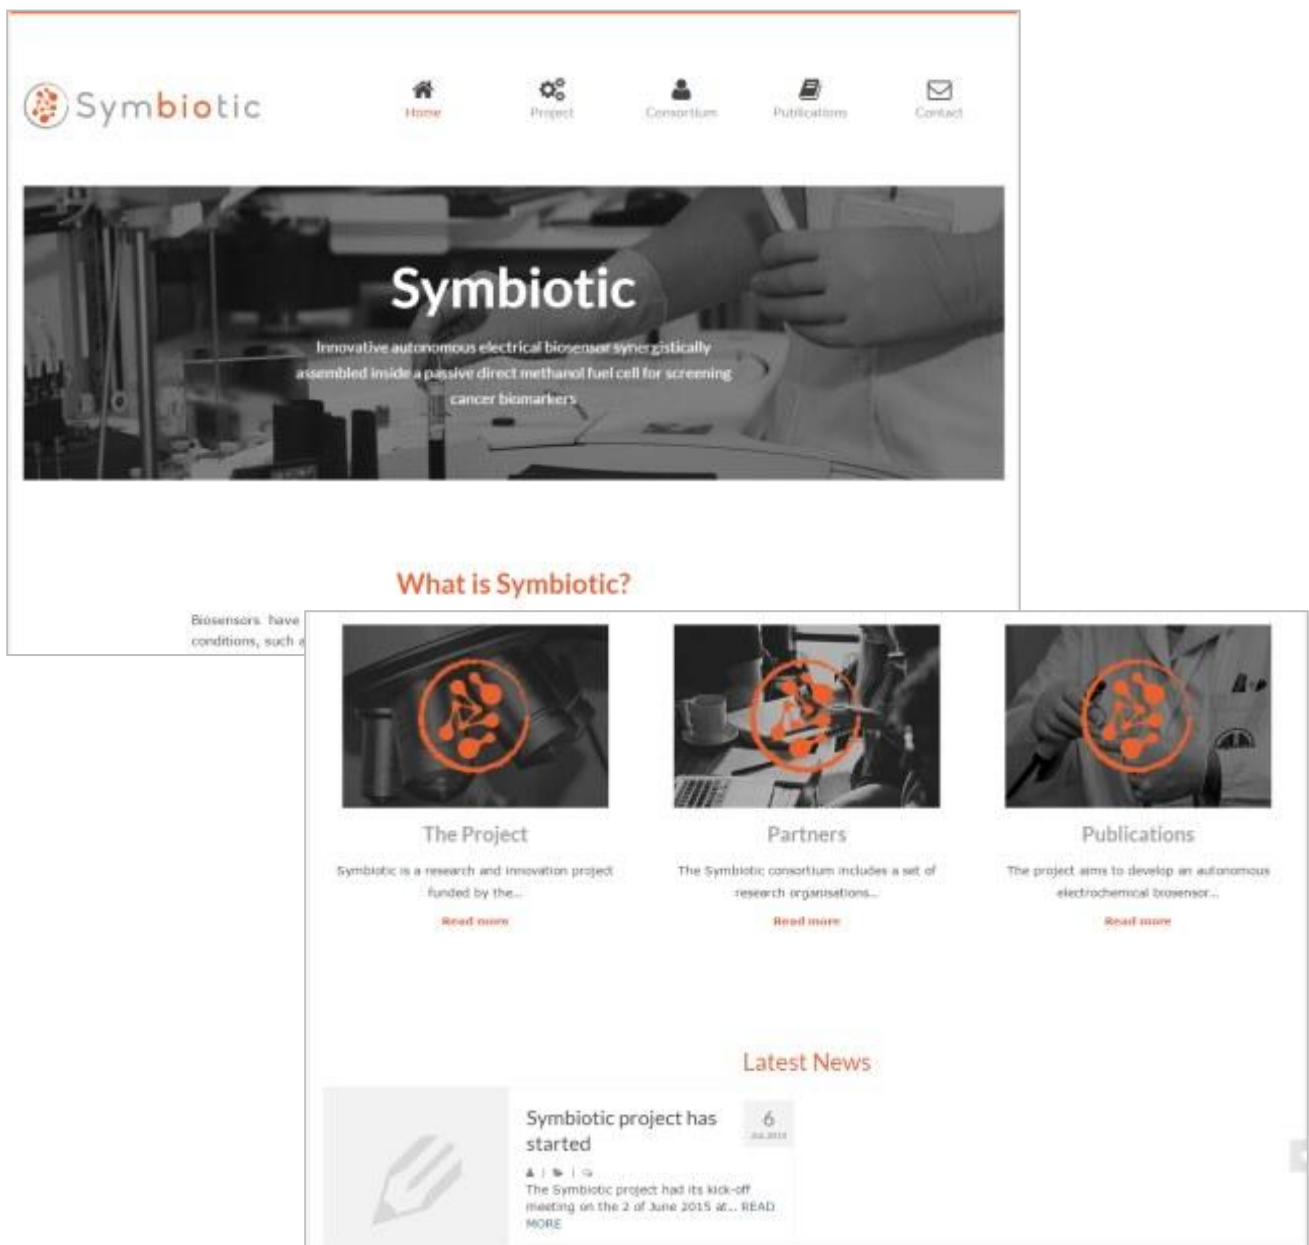

Figure 2 – Website main page

4. Project Page

This page contains a more detailed a description of the Symbiotic project. This content will be continually maintained to include updates and correction of mistakes on the basis of new project developments, input from the users, the Commission, the monitoring performed by the partners, or any new information deemed relevant;

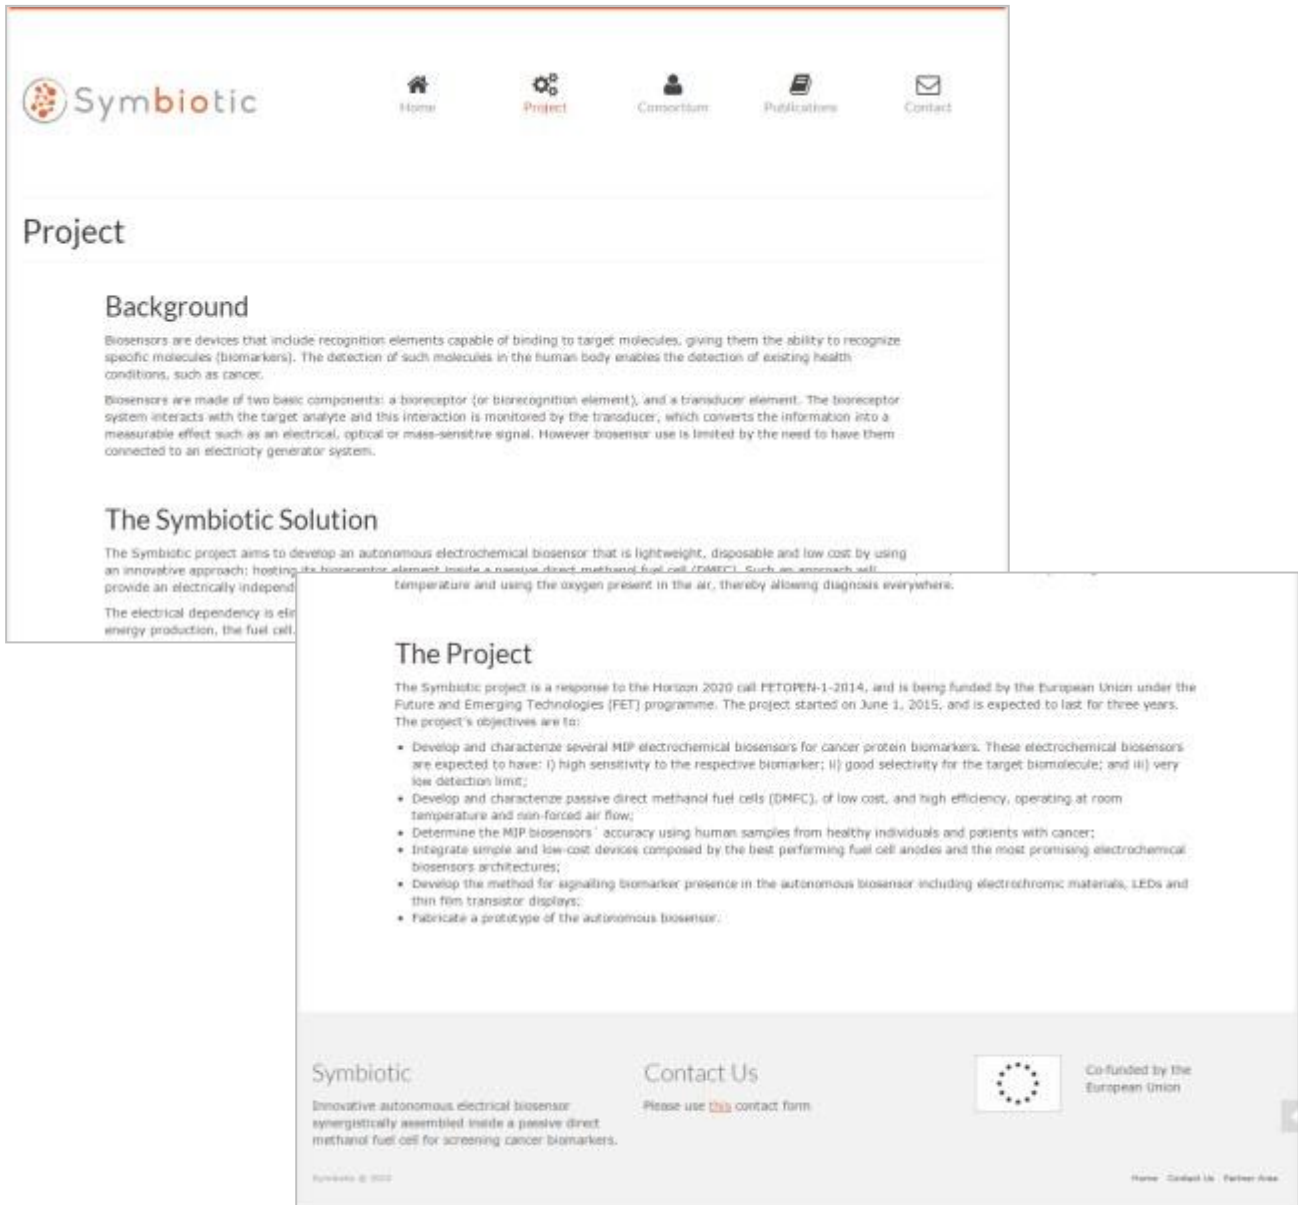

Figure 3 – Website Project page

5. Consortium

This page contains a quick description of the consortium partners. It will be updated as necessary to reflect changes to the organisations or their role in the project.

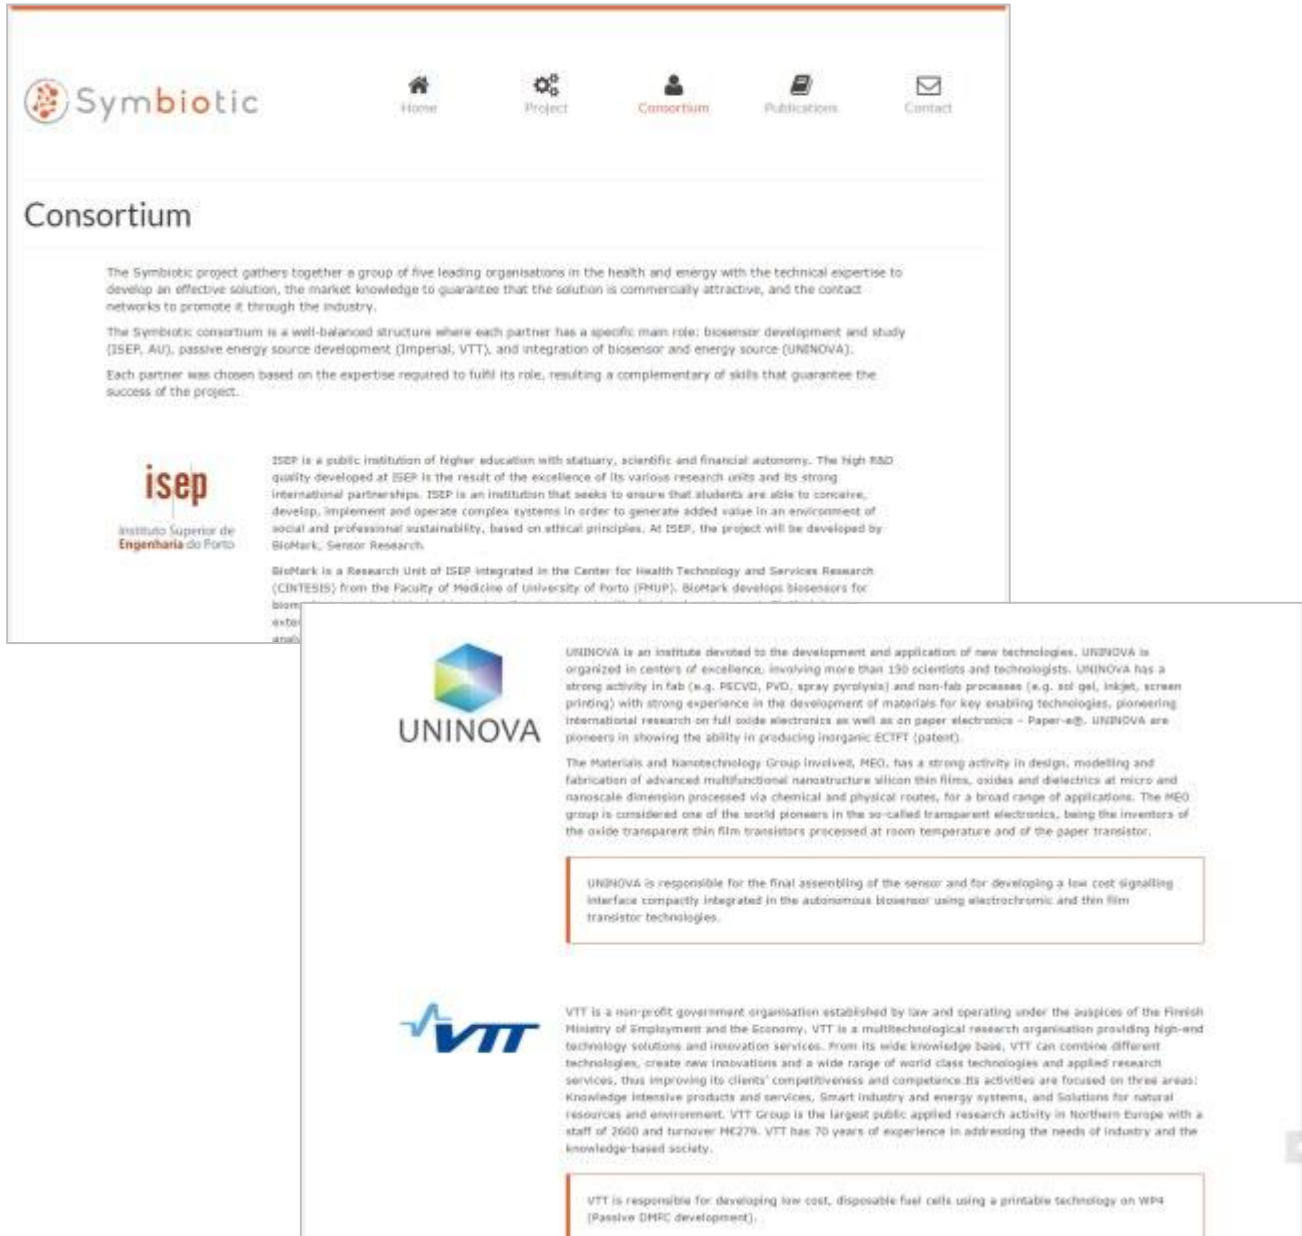

Figure 4 – Website Consortium page

6. Publications

Symbiotic is a Research and Development (R&D) project, and it is expected to generate several technical papers to be published in scientific journals and other related mediums. As per the contract agreement with the EU, all of these papers are expected to be freely available to the public.

The Publications page will contain all the papers published by the consortium during the lifetime of the project that resulted from work done in Symbiotic. These papers will be freely available for download by any interested parties.

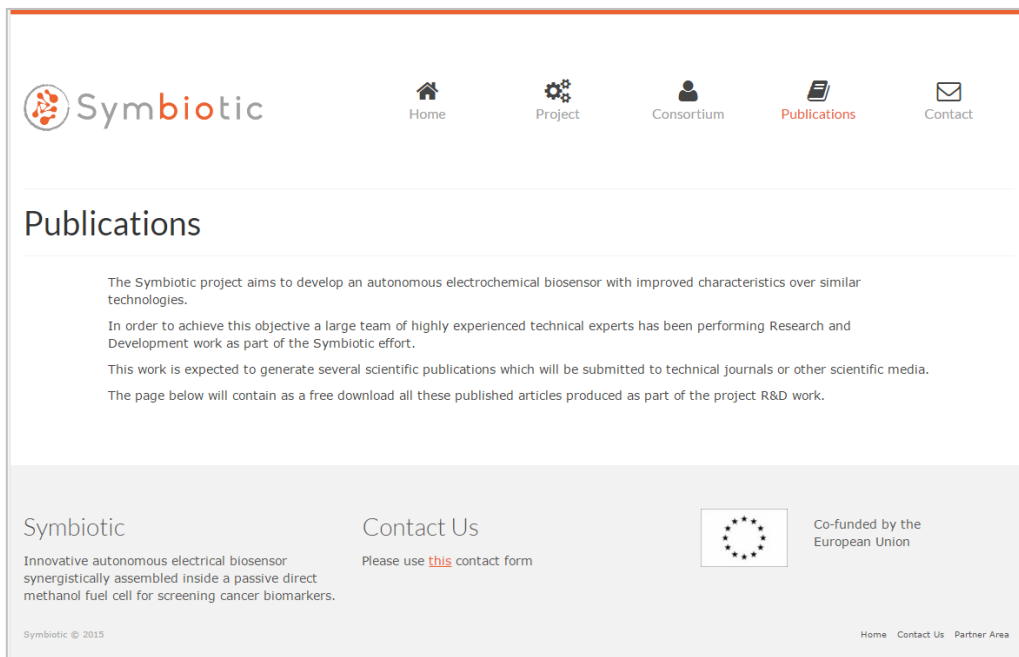

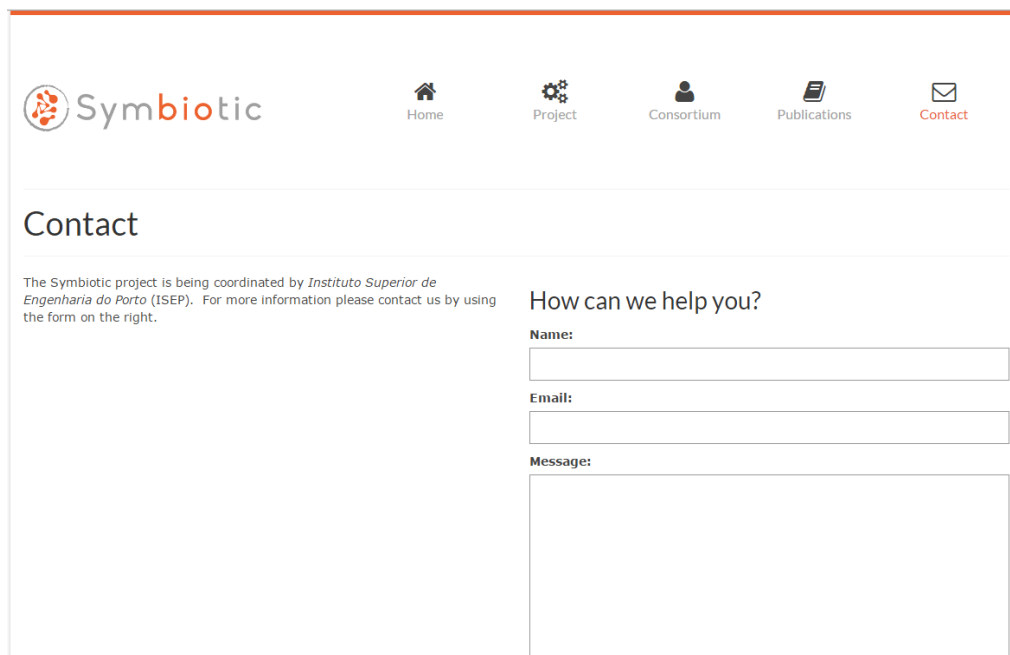

Figure 5 – Website Publications page

7. Other Areas and Future Work

The website also contains a contact area where users can fill and submit a small form if they wish to send a message to the consortium. This form will send an encrypted email to an address created specifically for the purpose, and which serves as the first contact point for external parties.

The screenshot shows the contact page of the Symbiotic website. At the top, there is a navigation bar with the Symbiotic logo on the left and five menu items: Home, Project, Consortium, Publications, and Contact. The Contact item is highlighted in red. Below the navigation bar, the page title is "Contact". A paragraph of text states: "The Symbiotic project is being coordinated by *Instituto Superior de Engenharia do Porto (ISEP)*. For more information please contact us by using the form on the right." To the right of this text is a form titled "How can we help you?". The form contains three input fields: "Name:", "Email:", and "Message:". The "Message:" field is a larger text area.

Figure 6 – Website Contact page

The website will continue to be worked on and expanded as the project evolves. In particular the next work on the website will focus on developing a private area meant for the consortium partners only, where they will be able to exchange files and information as needed.
